

**App. No.: 10/695,969**

**AMENDMENTS TO THE CLAIMS**

The following listing of claims replaces all prior listings of claims in the present application.

**What is claimed is:**

**1. (Previously Presented) A semiconductor integrated circuit, comprising:**

a silicon substrate;

a silicon epitaxial layer that touches the surface of said silicon substrate and has a lower resistivity than the resistivity of said silicon substrate;

first and second circuit sections formed in said silicon epitaxial layer; and

a device isolation region projecting from said silicon substrate up to a surface of each of said first and second circuit sections between said first and second circuit sections.

**2. (Previously Presented) The semiconductor integrated circuit according to Claim 1, wherein the resistivity of said silicon substrate is between 20 and 100 times the resistivity of said silicon epitaxial layer.**

**3. (Previously Presented) The semiconductor integrated circuit according to Claim 2, wherein the resistivity of said silicon substrate is between 50 and 100 times the resistivity of said silicon epitaxial layer.**

**4. (Canceled)**

App. No.: 10/695,969

5. (Original) The semiconductor integrated circuit according to Claim 1, wherein a digital circuit is formed on said first circuit section, and an analog circuit is formed on said second circuit section.

6-10. (Canceled).

11. (Previously Presented) The semiconductor integrated circuit according to Claim 1, wherein said silicon epitaxial layer is a single layer.

12. (New) The semiconductor integrated circuit according to Claim 1, wherein said silicon epitaxial layer is a p-type bulk epitaxial layer.

13. (New) The semiconductor integrated circuit according to Claim 12, wherein said silicon substrate comprises a p-type bulk substrate.

14. (New) The semiconductor integrated circuit according to Claim 13, wherein a first impurity concentration of the p-type bulk substrate is one-hundredth or less a second impurity concentration of the p-type bulk epitaxial layer.

15. (New) The semiconductor integrated circuit according to Claim 13, wherein said silicon substrate has a thickness of 0.7mm and a resistivity of 1000 Ohm - cm.

**App. No.: 10/695,969**

**16. (New)** The semiconductor integrated circuit according to Claim 12, wherein said p-type bulk epitaxial layer is formed by a chemical vapor deposition method.

**17. (New)** The semiconductor integrated circuit according to Claim 12, wherein said silicon epitaxial layer has a thickness of 5 micrometers and a resistivity of 10 Ohm – cm.
